

Table of Contents

Part I. HOW TO READ A COSMETIC INGREDIENT LIST

Chapter 1. General rules for cosmetic ingredient labeling

- 1.1. Order of ingredients on a label
- 1.2. Terminology and spelling
 - 1.2.1. Use of Latin names
 - 1.2.2. What does “nano” mean?
 - 1.2.3. Identification of dyes and pigments

Chapter 2. Subtleties, traps, and pitfalls: why the conventional rules do not always work

- 2.1. Manipulations by manufacturers
- 2.2. Myths about “cosmetic formulations decoders”
 - 2.2.1. Myth 1. Quantitative
 - 2.2.2. Myth 1. Natural vs. Non-natural
 - 2.2.3. Myth 3. Alcohol and spirits
 - 2.2.4. Plant extracts vs. High-tech ingredients
 - 2.2.5. Ingredient analyzer will make everything clear
- 2.3. So, what can be recognized from the ingredient list?

Part II. COSMETIC INGREDIENTS

Chapter 1. Cosmetic bases: form determines the content

- 1.1 Water
- 1.2. Oil phase
- 1.3. Emulsifiers
 - 1.3.1. Direct emulsifiers
 - 1.3.2. Reverse emulsifiers
 - 1.3.3. Emulsifiers for lamellar emulsions
 - 1.3.4. Emulsifier-free emulsions
- Emulsifying polymers
- Mineral particles
- 1.4. Structure-forming agents and thickeners
 - 1.4.1. Structure-forming agents
 - Fatty alcohols
 - Esters
 - Waxes
 - 1.4.2. Polymeric thickeners
 - Synthetic thickeners
 - Semi-synthetic polymers
 - Natural polymers
- 1.5. Chelators
- 1.6. Preservatives
 - 1.6.1. Parabens
 - 1.6.2. Formaldehyde donors
 - 1.6.3. Organohalogen compounds
 - 1.6.4. Isothiazolinones
 - 1.6.5 Aromatic alcohols
 - 1.6.6. Organic acids and their salts

- 1.6.7. Silver salts
- 1.6.8. Alternative preservatives
- 1.7. Fragrances
- 1.8. Dyes
 - 1.8.1. Dyes and pigments: what is the difference?
 - 1.8.2. Synthetic dyes
 - 1.8.3. Natural dyes
- 1.9. Multifunctional ingredients

Chapter 2. Biologically active substances and functional ingredients

- 2.1. Cleaning agents
 - 2.1.1. Surfactants
 - Chemical nature and mechanism of action
 - Surfactant types and examples
 - Cutaneous effects
 - 2.1.2. Cleaning products Soap
 - Oil-free cleansers
 - Cleansing emulsions
 - 2.1.3. Special additives
 - Moisturizing agents
 - Soothing agents
 - Other agents
- 2.2. Emollients and physiological lipids
 - 2.2.1. Emollients
 - 2.2.2. Physiological lipids
- 2.3. Humectants and moisturizers
 - 2.3.1. Sebum-like and occlusion substances
 - 2.3.2. Water-binding substances
 - Polymeric substances and surface moistening (“wet compress” method)
 - Natural moisturizing factor and “deep” skin moisturizing
 - Glycerin
 - 2.3.3. Osmotic moisturizing
- 2.4. Peel agents and exfoliants
 - 2.4.1. Special features of keratolytic peel agents
 - 2.4.2. α -Hydroxy acids and polyhydroxy acids: acid “shock” of the stratum corneum
 - α -Hydroxy acids
 - Polyhydroxy acids
 - 2.4.3. Proteolytic enzymes: selective cleavage of corneodesmosomes
 - 2.4.4. Retinoids: stimulation of basal keratinocytes proliferation
 - 2.4.5 Scrubs: mechanical removal of horny scales
 - 2.4.6. What is the difference between exfoliation and peel?
- 2.5. Antioxidants and soothing substances
 - 2.5.1. Why our body needs antioxidants?
 - 2.5.2. Why do antioxidants need in skincare products?
 - 2.5.3. Guidelines for making antioxidant formulas
 - 2.5.4. Algorithm for choosing antioxidant cosmetics
 - 2.5.5. Topical antioxidant applications

Daycare and sun protection

Anti-age

Pre- and post-treatment

Skin lightening

2.5.6. Soothing ingredients

2.6. Signaling agents: retinoids, peptides, growth factors, and phytoestrogens

2.6.1. How the cell “hears” the signal

2.6.2. Retinoids and retinoid-like substances

Plant precursors of retinoids in cosmetics

2.6.3. Synthetic signal peptides

Remodeling peptides

Homeostasis stabilizing peptides

Myorelaxants (botulomimetics) and topical botulinum toxin

Melanogenesis modulators

Activators of the antimicrobial peptide production system

Immunomodulators

Neurotransmitters

Peptides-improving microcirculation and lymph flow

2.6.4. Recombinant growth factors

2.6.5. Phytoestrogens

2.7. Neuro- and vasoactive substances

2.7.1. Terminology nuances

2.7.2. Neurocosmetic ingredients

2.7.3. Vasoactive ingredients

2.8. Depigmentants and brightening agents

2.8.1. Types of ingredients

2.8.2. Restricted or prohibited substances

Hydroquinone

Phenolics

Mercury

2.8.3. Cosmetic ingredients

Azelaic acid

Arbutin

Ascorbic acid and its derivatives

Fatty acids

Kojic acid

Citric acid

Lignin peroxidase

N-acetyl glucosamine

Niacinamide

Resveratrol

Retinoids

Tranexamic acid

Ferulic acid

Fruit acids

2.8.4. Plant extracts with the complex lightening effect

- Soya extract
- Licorice extract
- Aloe extract
- Mulberry extract
- Shiitake mushroom extract
- Green tea
- 2.9. Tinting agents
 - 2.9.1. Self-tanners
 - 2.9.2. Pigments for decorative cosmetics
- 2.10. Cosmetic Illusionists: substances for matting and optical effects
 - 2.10.1. How an illusion is created
 - 2.10.2. Nature of illusionist substances
- Polymer fillers and waxes
- Mineral fillers
- Interference pigments
- 2.11. Photoprotection, anti-pollution, and protection against external influences
 - 2.11.1. UV protection
 - Sunscreens evaluation and labeling UV filters: general information
 - Organic UV filters
 - Inorganic UV filters
 - 2.11.2. Protection against infrared radiation
 - 2.11.3. Protection against visible light
 - 2.11.4. Anti-pollution: the big city cosmetics
 - Passive protection and facilitation of pollution removal
 - Active protection
 - 2.11.5. Protection from everything
 - 2.12. Pre-, post-, and probiotics
 - 2.12.1. Terminology and technology nuances
 - 2.12.2. Probiotics and postbiotics in cosmetics
 - 2.12.3. Prebiotics in cosmetics

PART III. COSMETIC FORMS AND PRODUCTS

- 1.1. Solutions
 - 1.1.1. Oil solutions
 - 1.1.2. Aqueous solutions
 - 1.1.3. Biphasic solutions
 - 1.1.4. Polymer solutions
 - 1.1.5. Surfactant solutions, micellar solutions
- 1.2. Gels
 - 1.2.1. Aqueous gels
 - 1.2.2. Oil-based gels
- 1.3. Emulsions
- 1.4. Pastes and suspensions
- 1.5. Foams
- 1.6. Powders
- 1.7. Solid forms

PART IV. SKIN PROBLEMS TO BE SOLVED WITH COSMETICS

- 1.1. Dry, low sebum skin

- 1.2. Oily skin
- 1.3. Pigmented spots
- 1.4. Rosacea
- 1.5. Sensitive skin
- 1.6. Age-related skin changes

PART V. TURNING TO DETAILS: SOME OF THE MOST COMMON QUESTIONS ABOUT COSMETICS

Silicones are, at best unnecessary ballast, but at worst, they clog pores and don't let your skin breathe. Why are they used in both expensive and cheap cosmetics if there is nothing good in them?

Is it true that essential oils are safer than synthetic fragrances, and can they replace active ingredients?

What is the threat of alcohol in cosmetics?

People write on the Internet that glycerin in cosmetics dries the skin and must be avoided. Is it true?

Why do cosmetics need propylene glycol? It is poison!

Is it true that cosmetics based solely on vegetable oils are much healthier?

Do herbal extracts work? Is it true that the more extracts listed on the label, the more influential the product is?

What is stem cell cosmetics? Does it use actual stem cells? And how will apple stem cells help my skin?

How effective are growth factor cosmetics? Is it dangerous to use them?

Many cosmetics say "paraben-free" in large letters. Are they that dangerous?

What does the new trend of hybrid cosmetics mean?
