

Table of Contents

Part I. ATOPIC DERMATITIS

Chapter 1. Etiology and pathogenesis

1.1 The “outside-in” scenario, or disruption of the skin barrier

1.1.1. Epidermal barrier organization

Morphological layers of the epidermis

Desmosomes and tight contacts between keratinocytes

Stratum corneum formation

Lipid layers of the stratum corneum

1.1.2. Epidermal barrier changes in atopic dermatitis

Mutations in the filaggrin gene

Defects in corneodesmosomes and tight contacts

Changes in hydrolipid mantle composition

Changes in skin surface pH

1.2. The “inside-out” scenario, or immune dysregulation

1.3. Role of the microbiome in the development of atopic dermatitis

1.3.1. Intestinal microbiome and atopic dermatitis

1.3.2. Changes in the skin microbiome in atopic dermatitis

1.3.3. The role of *S. aureus* in the pathogenesis of atopic dermatitis

1.4. Psychoneuroimmunology of atopic dermatitis

Chapter 2. Clinical picture, diagnostics, and treatment

2.1 Clinical picture (Albanova V.I.)

2.2. Diagnostic criteria and differential diagnosis (Albanova V.I.)

2.2.1. Mandatory and additional diagnostic criteria

2.2.2. Differential diagnosis

2.3. Treatment

2.3.1. Topical remedies (Albanova V.I.)

2.3.2. Physiotherapy

UV therapy

Blue light chromotherapy

Photobiomodulation therapy

Extremely high-frequency therapy (EHF therapy)

2.4. Nutritional characteristics and nutraceutical support

2.4.1 Characteristics of food allergies in adult patients with atopic dermatitis

2.4.2 Nutraceutical support

Maintaining a normal weight

Avoiding Western diets

Vegetarian diet

Fatty acids

Vitamin D (Albanova V.I.)

2.4.3. Probiotics

Chapter 3. Skincare for atopic skin

3.1. Skin cleansing

3.1.1 General recommendations

3.1.2. Application of topical products after cleansing (Albanova V.I.)

3.2. Cosmetic products

3.2.1. Emollients: ingredients

Imitation of sebum and occlusion

Lipid barrier restoration and strengthening

Moisture traps: substances that bind water

3.2.2. Emollients: properties and application

Recommendations for the use of emollients

The steroid-preserving effects of emollients

Emollients and the skin microbiome

3.3. Which ingredients in cosmetic products should patients with atopic dermatitis beware of

3.3.1. Ingredients of cosmetic products with a high risk of skin sensitization

3.3.2. Allergy-inducing fragrances

3.3.3. Nut extracts

Chapter 4. Aesthetic approaches for prevention and treatment of signs of aging and aesthetic problems in atopic skin

4.1. Inflammation of atopic skin and strategy of preventive anti-age care

4.1.1 Causes of inflammation

4.1.2. Factors contributing to the development of skin inflammation

4.1.3. Clinical signs of skin inflammation

4.1.4 Inflammation monitoring

4.1.5. General approaches to atopic skincare

4.2. Specific features of aesthetic treatment

4.2.1. Chemical peels

Keratolytic peel

Enzymatic peel

Retinol peel

Acid peel

4.2.2. Injection procedures

Contour plastic surgery, mesotherapy and biorevitalization

PRP therapy

Carboxytherapy

4.2.3. Energy-based technologies

4.3. Patient with atopic dermatitis at the aesthetician office

References

Part II. PSORIASIS

Chapter 1. Psoriasis, a chronic inflammatory skin disease

1.1. Let's understand the pathogenesis of psoriasis. Keratinocytes or immune cells — who is the culprit?

1.2. Skin barrier disruption

1.2.1. Biochemical markers of damaged epidermal barrier in psoriasis

1.2.2. Dry skin and increased TEWL

1.2.3. Hyperkeratosis and desquamation

1.2.4. Hypersensitivity

1.3. Microbiome changes

1.3.1. Intestinal microbiome in psoriasis

1.3.2. Skin microbiome peculiarities

Chapter 2. Clinical picture, diagnostics, and treatment

2.1. Clinical picture depending on the subspecies and stage of psoriasis. Seasonal factor

2.1.1. Subtypes of psoriasis

2.1.2. Stages of psoriasis (Albanova V.I.)

2.1.3. Seasonal character of manifestations of disease (Albanova V.I.)

2.2. Diagnostic criteria and differential diagnosis (Albanova V.I.)

2.3. Treatment

2.3.1. General provisions for the treatment of psoriasis

The use of vitamin D and its analogs in the therapy of psoriasis (Albanova V.I.)

2.3.2 Phototherapy for psoriasis

IPL therapy

Laser therapy (Kalashnikova N., Urakova D.)

2.4. Nutritional peculiarities and nutraceutical support

2.4.1. Mediterranean diet

2.4.2. Anti-inflammatory diet and lifestyle

Increasing the proportion of anti-inflammatory products in the diet

Reducing the proportion of food with proinflammatory properties in the diet

Reducing the level of sugar in the blood

2.4.3. Probiotics and psoriasis

Chapter 3. Cosmetic skincare

3.1. Cleansing (Albanova V.I.)

3.2. Healing effects of salt baths in psoriasis

3.2.1. Osmotic effects in the stratum corneum and epidermis

Osmotic hydration of the stratum corneum

Osmotic stimulation of epidermal cells

Concentration, composition and pH are the main parameters determining the outcome of saline solution on the skin

3.2.2. Why Dead Sea water is indicated for psoriasis treatment

3.2.3. Synergistic effect of combining salt baths and phototherapy

3.2.4. Comparison of efficacy of natural thalassotherapy in the Dead Sea, salt baths with Dead Sea salts, and conventional salt baths

3.3. Basic skincare products

3.3.1. Emollients

3.3.2 Urea

3.3.3 Hydroxy acids

Alpha hydroxy acids (AHAs)

Polyhydroxy acids (PHA)

3.3.4. Salicylic acid

3.3.5. Nicotinamide

3.3.6. Birch tar

3.4. Basic care and choice of skincare & aesthetic procedures according to the stage of the disease

3.4.1. Progressive stage

3.4.2. Stationary and regressive stages

3.5. Nail care (Albanova V.I.)

3.6. Hair care (Albanova V.I.)
