

Table of Contents

Part I. Physical modalities in skincare and aesthetic practice (Deev A.I., Hernandez Jimenez E.I.)

Chapter 1. Electrotherapy

- 1.1. Electricity and magnetism: the all-penetrating “Invisibles”
- 1.2. Effects of electric current on the body
 - 1.2.1. History of electrotherapy
 - 1.2.2. What happens in biological tissue under the action of electricity
- 1.3. Effects of the magnetic field on the body
 - 1.3.1. Background
 - 1.3.2. What happens in biological tissue when a magnetic field is applied
- 1.4. Variety of technologies, variety of effects
 - 1.4.1. Three groups of electrical technologies
 - Resistive technologies
 - Capacitive technology
 - Inductive technologies
 - 1.4.2. The concept of “radiofrequency” in electrotherapy and RF technologies
- 1.5. Methods of electrotherapy in skincare and aesthetic medicine
 - 1.5.1 Low-voltage direct electric current
 - Galvanization
 - Ionophoresis
 - Desincrustation
 - Electroepilation
 - 1.5.2. Low frequency and low voltage pulsed alternating electrical current
 - Diadynamic therapy
 - Diadynamophoresis
 - Electrostimulation
 - Microcurrent therapy
 - Percutaneous electrical neurostimulation (PENS-therapy), dynamic electrical neurostimulation (DENS-therapy)
 - Electrolypolysis
 - 1.5.3. High voltage pulsed direct current
 - Electroporation
 - Nanosecond electrical pulses for tumor destruction
 - 1.5.4. High frequency alternating electrical current
 - Electro(radio)surgery
 - RF lifting and rejuvenation (RF therapy)
 - Fractional radiofrequency thermolysis (RF thermolysis)
 - Radiofrequency liposuction (RF liposuction)
 - Radiofrequency lipolysis (RF lipolysis)
 - Noninvasive RF diathermy and electroporation of adipose tissue
 - High-frequency electroepilation
 - 1.5.5. Low frequency alternating electric current
 - Ultrasonotherapy
 - Darsonvalization

Amplipulse therapy (myostimulation) Rhydolysis
Interference therapy
Fluorization
1.5.6. Magnetic field
Magnetotherapy
Inductothermy
1.5.7. High-frequency electromagnetic field
Ultra high-frequency therapy (UHF therapy)
Microwave therapy
Extremely high frequency (millimeter) therapy (EHF therapy)

References

Chapter 2. Phototherapy

2.1. The electromagnetic “range” of photo technologies
2.2 Tissue heating, the main and not always desired effect of light absorption
2.3. IPL vs. laser
2.4. Key parameters determining the choice of technology and treatment parameters
2.4.1. Wavelength and skin penetration depth
2.4.2. Expose mode and duration
2.4.3. Light power density
2.4.4. Light spot and focusing light energy
2.4.5. Radiation sources
Spectral characteristics
Power characteristics
2.4.6. Skin phototype
2.4.7. Exposure site
2.5. Phototherapy: the light that brings life
2.5.1. Infrared therapy (IR therapy)
General characteristics of infrared light
Peculiarities of infrared light effects on the human body and primary indications for infrared therapy
IR sauna
IR applicators
IR thermolifting
Increasing the penetration of hyaluronic acid into the skin with an IR laser
Adverse effects of long-term IR irradiation
2.5.2. Visible light therapy
Chromotherapy: the healing power of color
Low-intensity laser light therapy (LLLT; photobiostimulation)
Why and how does LLLT work?
Clinical effects and therapeutic applications
2.5.3. Ultraviolet therapy (UV therapy)
Some facts about the effect of ultraviolet light on the human body
What is skin photodamage
UV therapy in dermatology
Tanning beds
Choosing the optimal UV exposure parameters

2.6. Photodestruction: the destructive power of light

2.6.1. Nonselective photothermolysis

Laser scalpel

Laser resurfacing

Fractional photothermolysis

2.6.2. Selective photothermolysis

Vascular malformations treatment

Photo epilation

Pigment spots lightening

Skin photorejuvenation

Tattoo removal

Laser-assisted lipolysis

Acne therapy

2.6.3. Photodynamic therapy (PDT)

Mechanism of action

Topical photosensitizers

Light sources

PDT effects and perspectives of use in cosmetic dermatology

2.6.4. Optical breakdown

2.6.5. Bucky therapy

References

Chapter 3. Cold plasma therapy

3.1. Nature of plasma

3.2 Biological effects

3.3. Types of plasma devices

3.3.1. Plasma jet

3.3.2. Plasma resurfacing

Chronic wound treatment

Treatment of fungal, bacterial, and viral skin lesions

Vessel coagulation

3.3.2. Dielectric barrier discharge (DBD)

3.3.3. Corona discharge

3.3.4. Fractional microplasma thermolysis

3.4. Perspectives of plasma technologies in cosmetic dermatology and aesthetic medicine

References

Chapter 4. Sound therapy

4.1. Nature of sound waves

4.1.1. Key parameters

4.1.2. Mechanical resonance

4.2. Vibroacoustic therapy in the sound frequency range

4.2.1. Music therapy

4.2.2. Melo massage

4.3. Ultrasonic (US) therapy

4.3.1. Dolphin therapy

4.3.2. Focused US therapy

- 4.3.3. US lifting
- 4.3.4. US lipolysis
- 4.3.5 US peel
- 4.4. Shock-wave therapy: infrasound treatment

References

Chapter 5. Mechanotherapy

- 5.1. If we feel the touch, we are alive
- 5.2. How the skin feels
 - 5.2.1. Skin receptors are antennae for picking up external signals
 - 5.2.2. Non-receptor skin cells also “feel” the touch
- 5.3. Pressure therapy vs. vacuum therapy
- 5.4. Mechanotherapy technologies
 - 5.4.1 Pressure therapy Impulse barotherapy Shiatsu massage
 - 5.4.2. Vacuum therapy
 - 5.4.3. Vibrotherapy
 - Mechanism of action and clinical effects
 - Vibrotherapy devices
 - Contraindications
 - 5.4.4. Complex mechanical modalities
 - Vibrovacuum therapy
 - Mechanovacuum therapy
- 5.5. Building the muscular framework of the body and posture improvement
- 5.6 Mechanical destruction treatment
 - 5.6.1. Microdermabrasion
 - Sandblasting microdermabrasion
 - Diamond glow microdermabrasion
 - HydraFacial technology
 - 5.6.2. Automated micro-needling
 - 5.6.3. Automated digital hair removal

References

Chapter 6. The synergy of physical modalities

- 6.1. Combined action on the skin matrix and cells
- 6.2. Synergy of simultaneous impacts
- 6.3. Multicomponent synergism

References

PART II. Physical METHODS OF TRANSDERMAL DELIVERY OF ACTIVE SUBSTANCES (Deev A.I., Hernandez Jimenez E.I.)

- 1.1. What is transdermal delivery?
- 1.2. Iontophoresis, or “electric whip” for charged molecules
 - 1.2.1. How Iontophoresis works
 - 1.2.2. What happens in the skin during iontophoresis
 - 1.2.3. Factors affecting the iontophoretic delivery
 - 1.2.4. Practical aspects of iontophoresis procedure
 - 1.2.5. Clinical effects and application in dermatology and skincare
- 1.3. Electroporation, or “lightning stroke” on the stratum corneum
 - 1.3.1. Biophysical basis of electroporation

- 1.3.2. Peculiarities of electroporation of the stratum corneum
- 1.3.3. Factors affecting the transdermal delivery of substances by electroporation
- 1.3.4. Practical aspects of electroporation procedure
- 1.3.5. Application in dermatology and skincare
- 1.4. Sonophoresis, or the “Jericho tubes” of skincare
 - 1.4.1. Key parameters of sonophoresis
 - 1.4.2. Mechanisms of skin permeability increase with sonophoresis
 - 1.4.3. Sonophoresis procedure
 - 1.4.4. Clinical effects and application in dermatology and skincare
- 1.5. Mechanical perforation, or “micro-drilling” of the stratum corneum
 - 1.5.1. Fractional microdermabrasion
 - 1.5.2. Micro-needling
- 1.6. Fractional thermomechanical ablation, or spot “burning” of the skin

Resume

Part III. NATURAL AND PREFORMED PHYSICAL FACTORS (Deev A.I., Hernandez Jimenez E.I.)

Chapter 1. Aerotherapy: therapeutic factors of the air

- 1.1. What does aerotherapy affect?
- 1.2. Natural aerotherapy
- 1.3. Halotherapy
- 1.4. Hypo- and hyperoxygenation therapy
 - 1.4.1. Hypobaric oxygenation
 - 1.4.2. Hyperbaric oxygenation
 - 1.4.3. Normoxic therapeutic compression
- 1.5. Aeroionotherapy

Chapter 2. Temperature therapy: heat and cold

- 2.1. Thermotherapy: physiological effects and methods
- 2.2. Cryotherapy: physiological effects and methods
 - 2.2.1. General cryotherapy
 - 2.2.2. Local cryotherapy

Cryodestruction

Cryolipolysis

Cryomassage

Cryoneuromodulation

Chapter 3. Hydrotherapy: *sanus per aqua*

- 3.1. Why does the stratum corneum need water?
- 3.2. Water vapor therapy
- 3.3. Water therapy
- 3.4. Hydromassage

Chapter 4. Thalassotherapy: the sea of health!

- 4.1. Wraps, the therapeutic body masks
- 4.2. Algae wraps
- 4.3. Mud wraps

Chapter 5. Radiation therapy

- 5.1. Healing radiation
- 5.2. How radon baths affect the body

References

PART IV. INSTRUMENTAL ASSESSMENT OF THE SKIN (Hernandez Jimenez E.I., Krayushkin P.V.)

Chapter 1. Methods of functional analysis (Hernandez Jimenez E.I.)

- 1.1. Evaluation of the stratum corneum hydration
- 1.2. Evaluation of the skin barrier function
- 1.3. Evaluation of the sebum production
- 1.4. Evaluation of the acid-base balance on the skin surface
- 1.5. Evaluation of the pigmentation and erythema
- 1.6. Evaluation of the skin elasticity

Chapter 2. Methods of structural (morphological) analysis (Hernandez Jimenez E.I.)

- 2.1. Optical coherence tomography (OCT)
- 2.2. Confocal laser scanning microscopy (CLSM)
- 2.3. Ultrasound scanning

Chapter 3. Digital image processing methods (Krayushkin P.V.)

- 3.1. Scope and types of digital skin surface imaging techniques
- 3.2. Digital photography and photo documentation
- 3.3. Image-based 3D modeling
- 3.4. Total body photography and digital dermatoscopy
 - 3.4.1. Automated total body surface mapping (ATBM)
 - 3.4.2. Digital dermatoscopy
 - 3.4.3. Digital Trichoscopy
- 3.5. Artificial intelligence in digital imaging systems

PART V. PHYSICAL TREATMENT OF THE MOST COMMON AESTHETIC PROBLEMS (Sharova A.A., Bragina I.Yu.)

Chapter 1. Age-related skin changes

- 1.1. Wrinkly morphotype of aging
 - 1.1.1. Clinical signs
 - 1.1.2. Treatment strategy
 - 1.1.3. Choice of method
- 1.2. Deformed morphotype of aging
 - 1.1.1. Clinical signs
 - 1.1.2. Treatment strategy
 - 1.1.3. Choice of method
- 1.3. Combined physical treatment for skin rejuvenation

Chapter 2. Hyperpigmentation

- 2.1. Clinical signs
- 2.2. Treatment strategy
- 2.3. Choice of method

Chapter 3. Scars

- 3.1. Clinical signs
- 3.2. Treatment strategy
- 3.3. Choice of method

Chapter 4. Acne-prone skin

4.1. Clinical signs

4.2. Treatment strategy

3.3. Choice of method

Chapter 5. Vascular malformation

5.1. Clinical signs

5.2. Treatment strategy

5.3. Choice of method

Chapter 6. Orange peel and localized fat deposits

6.1. Clinical signs

6.2. Treatment strategy

6.3. Choice of method

Chapter 7. Unwanted hair

7.1. Clinical picture and treatment strategy

7.2. Depilation

7.3. Epilation

7.4. Contraindications to epilation

7.5. Adverse effects of epilation

Chapter 8. Dermatoses

8.1. Physical therapy in the treatment of skin diseases

8.2. Dermatitis

8.2.1. Clinical signs and symptoms

8.2.2. Physical devices and treatments

8.3. Psoriasis

8.3.1. Clinical signs and symptoms

8.3.2. Physical devices and treatments

8.4. SPA resorts

8.5. Combined physical therapy
