Introduction 13

PART I

BIOLOGY & PHYSIOLOGY OF SKIN PIGMENTATION

Chapter 1. How pigmentation forms 15
1.1. Skin color 15
1.2. Melanogenesis 16
 1.2.1. Melanocytes 17
 1.2.2. Stages of melanogenesis 21
 Melanin synthesis 21
 Pigment distribution in the epidermis 23
1.3. Melanin function 24
1.4. Melanogenesis-regulating mechanisms 27

Chapter 2. Differences in skin pigmentation 30
2.1. Skin phototypes 30
2.2. Ethnic skin types 33

Chapter 3. Pigmentation-affecting factors 37
3.1. Hormones, stress, and inflammation 37
 3.1.1. Endocrine factors 37
 3.1.2. Inflammation 38
 3.1.3. Stress 38
 3.1.4. Nutrient deficiencies 39
3.2. Solar radiation and tanning 40
 3.2.1. UV radiation 40
 3.2.2. Tanning 43
 Immediate pigment darkening (IPD) 43
 Persistent pigment darkening (PPD) 44

3.3. Visible and infrared radiation	45
3.4. Air pollution.....	46
Chapter 4. Evolution of pigmentation: adaptation to UV radiation	49
4.1. Internal "levers of pressure" in the evolution of pigmentation	50
4.1.1. Why sunburn, cancer, and vitamin D overproduction are not evolutionary "levers" of pigmentation	50
4.1.2. Folate is the key.....	52
4.1.3. Vitamin D is the next candidate for the internal "lever" of natural selection	53
4.2. External force of natural selection: UV radiation	54
4.2.1. Geographic variations of UV radiation	55
4.2.2. UV as a driving force of selection in the pigmentation evolution	58
4.2.3. UV radiation and the evolution of the skin's ability to tan	60
4.3. Conclusion	61

PART II

CLINICAL PICTURE & PIGMENTATION ANALYSIS

1.1. Pigmentation disorders	65
1.1.1. Pigmentation disorders associated with an increase in the number of melanocytes	66
Pigmented nevi	67
Lentigo	67
Peitz–Jeghers–Touraine syndrome	68
Mongolian spot	68
Nevus of Ota	68
Nevus of Ito	68
1.1.2. Pigmentation disorders associated with an increase in melanin	68
Café-au-lait spots	69
Freckles	69
Melasma	69

Drug-induced pigmentation	70
Post-inflammatory pigmentation	71
Periorbital pigmentation	75
Phytophotodermatoses	76
Ashy dermatosis	76
1.1.3. Non-melanin-related skin color changes	76
Ochronosis	77
Argyria	77
Jaundice	77
1.1.4. Hypomelanoses	78
1.2. Pigmentation analysis	78
1.2.1. Anamnesis	79
1.2.2. Examination	80
1.2.3. Instrumental evaluation of pigmentation when planning aesthetic treatment	80
Mexametry	81
UV visualization	82
3D visualization	83
1.3. What pigmentation can an aesthetician work with?	84

PART III

AESTHETIC METHODS FOR PREVENTING AND TREATING PIGMENT SPOTS

Chapter 1. Cosmetic products	91
1.1. Depigmenting and lightening agents	91
1.1.1. Targets in the skin	91
1.1.2. Obsolete and dangerous substances	93
Mercury	93
Phenol compounds	95
Hydroquinone	95
1.1.3. Active substances in modern topical pigmentation correctors	97
Azelaic acid	97
Arbutin	98

Kojic acid	99
Ascorbic acid	99
Niacinamide	100
N-acetylglycosamine	100
Tranexamic acid	100
Lignin peroxidase (lignase)	101
Cinnamic acid	101
Ferulic acid	101
Glycolic acid	102
Resveratrol	102
Fatty acids	103
1.1.4. Plant extracts with a complex lightening effect	103
Licorice	103
Soybean	104
Mulberry.....	104
Aloe.....	104
Green tea	105
Shiitake mushrooms	105
1.1.5. Retinoids	105
1.1.6. Whitening cosmetic formulations always contain a combination of ingredients aimed at different targets	106
1.2. Sunscreens	107
1.2.1. UV filters	107
1.2.2. Protection against visible light	110
1.2.3. Safety.....	111
1.2.4. Requirements for sunscreen products	112
UVB protection: SPF — sun protection factor	114
UVA protection: PPD — persistent pigment darkening reaction..	117
DNA PF — DNA protection factor	118
IPF — immune protection factor	118
1.2.5. Development of sunscreen formulation.....	118
Combination of several UV filters — maximum protection and minimum concentration	118
Product base — a guarantee of stability and good textural properties	119

Substances with additional valuable properties	120
1.2.6. How to choose the correct sunscreen	121
1.3. Antioxidants	125
1.3.1. Natural antioxidants in cosmetic products	127
Vitamin E (tocopherol)	127
Vitamin C (L-ascorbic acid)	128
β-Carotene	128
α-Lipoic acid (thioctic acid)	128
Coenzyme Q ₁₀ (ubiquinone)	128
Antioxidant herbal compositions	129
1.3.2. The art of antioxidant formulation	130
1.3.3. Selection algorithm for antioxidant skincare products	132
Antioxidant composition (primary antioxidant protection)	132
Protection of antioxidants against oxidation and degradation (secondary antioxidant protection)	135
1.4. Cosmetic camouflage	136

Chapter 2. Energy-based technologies for treating pigmentation disorders137

2.1. Light therapy	137
2.1.1. Skin preparation for laser treatment	137
2.1.2. Mechanism of action	138
2.1.3. Light technologies for treating pigmentary lesions	140
Green light	142
Yellow light	143
Red light	144
Near-IR light	144
Intensive pulse light (IPL)	145
Laser resurfacing and fractional photothermolysis	146
2.1.4. Low-level laser radiation	148
2.1.5. Effectiveness of laser treatment in pigmentation disorders	149
2.2. Mechanical methods	151
2.2.1. Microdermabrasion	151
2.2.2. Gas-liquid microdermabrasion	152

Chapter 3. Injectable methods	154
3.1. Microneedling	154
3.2. Biorevitalization	156
3.3. PRP therapy	157

Chapter 4. Nutraceuticals for skin lightening	158
4.1. Glutathione	158
4.2. <i>Polypodium leucotomos</i> fern extract	159
4.3. Tranexamic acid	160

PART IV
VITILIGO

1.1. Light therapy.....	163
1.1.1. Narrow band UVB (311 nm)	163
1.1.2. Focused microphototherapy (Bioskin Evolution®).....	163
1.1.3. B-band (XeCl) narrow-band UVB (308 nm) excimer laser	164
1.1.4. PUVA therapy	164
1.1.5. Photodynamic therapy.....	164
1.1.6. Sunscreens	165
1.2. Pharmacotherapy	166
1.3. Cosmetic and nutraceutical ingredients	167
1.4. Surgical methods	168
1.5. Depigmentation	168
1.6. Cosmetic camouflage.....	169
1.7. Treatment efficacy and prognosis	169

Conclusion	170
