

## Table of Contents

### **Part I. HAIR BIOLOGY** (Hernandez Jimenez E.I.)

#### **Chapter 1. Hair structure**

##### 1.1. Hair under the microscope

###### 1.1.1. Hair follicle

###### 1.1.2. Hair fiber

Cuticle, the protective coat of the hair shaft

Cortex, the layer responsible for mechanical properties of the hair shaft

Medulla, the center of hair shaft for thermal insulation

##### 1.2. Hair barrier system

##### 1.3. Skin and hair stem cells

##### 1.4. Hair and time

###### 1.4.1. Stages of hair growth

###### 1.4.2. Hair graying

##### 1.5. Ethnical differences

#### **References**

### **Chapter 2. Neuroendocrine regulation of hair growth** (Tkachev V.P., Sharova A.A.)

##### 2.1. Sex hormones

###### 2.1.1. Androgens

###### 2.1.2. Estrogens

##### 2.2. Thyroid hormones and Thyroid stimulating hormone (TTG)

##### 2.3. Prolactin

##### 2.4. Hypothalamic pituitary adrenal axis

##### 2.5. Insulin and insulin-like growth factors

##### 2.6 Vitamin D

##### 2.7. Thymus peptides

##### 2.8. Neurotransmitters

#### **References**

### **Part II. HAIR CARE COSMETIC PRODUCTS** (Hernandez Jimenez E.I.)

##### 1.1. Microclimate under the hair

##### 1.2. Substance on the surface of the hair shaft: what to expect?

##### 1.3. Washing hair

###### 1.3.1. Liquid shampoo

Shampoo formulation

Cleaning agents

Conditioning agents

Refatting agents

Bioactive substances

###### 1.3.2. Dry shampoo

###### 1.3.3. Water-based leave-in cleansing agents

###### 1.3.4. Conditioners

Rinse-off conditioners

2-in-1 Shampoo & Conditioner

Leave-in conditioners

###### 1.3.5. Balms and conditioners

#### 1.4. Dermatological chemical peel for the scalp (Khaldina M.V.)

##### 1.4.1. Formulation features

##### 1.4.2. General recommendations for the peel procedure

##### 1.4.3. Legislative aspects

#### 1.5. Hair styling and fixation products

##### 1.5.1. Polymers, the key ingredients for styling products

##### 1.5.2. Special additives enhancing styling properties

#### 1.6. Curling and straightening products

##### 1.6.1. How to change the hair shaft structure

##### 1.6.2. Types of perms

##### 1.6.3. Keratin treatment for straightening hair

#### 1.7. Hair color products

##### 1.7.1. Permanent hair color

##### 1.7.2. Semi-permanent and temporary hair color

##### 1.7.3. Plant-derived dyes

### References

## Part III. PHYSICAL THERAPY IN TRICHOLOGY (Khaldina M.V.)

### 1.1. General approaches

### 1.2. Treatment response

### 1.3. Light therapy

#### 1.3.1. Visible light (380–780 nm)

#### 1.3.2. Ultraviolet light (100–400 nm)

#### 1.3.3. Infrared light (780 nm – 1 mcm)

#### 1.3.4. Light therapy technologies

### Low-level laser therapy (LLLT)

### Laser phoresis

### Fractional photothermolysis

### Photochemotherapy

### Photodynamic therapy (PDT)

### 1.4. Electrotherapy

#### 1.4.1. Microcurrent therapy

#### 1.4.2. Iontophoresis

#### 1.4.3. Percutaneous electro neurostimulation

#### 1.4.4. Electroporation

#### 1.4.5. Electrotrichogenesis

### 1.5. Radiofrequency (RF) therapy

### 1.6. Oxygen-ozone therapy

### 1.7. Nomenclature of Medical Devices

#### 1.7.1. Coding system

#### 1.7.2. Types of medical services

#### 1.7.3. Physical treatments in trichology according to the Nomenclature of Medical Devices

### References

## Part IV. SCALP INJECTION TREATMENTS

### Chapter 1. Growth factors injections for hair loss (Vavilov V.V.)

#### 1.1. Multidirectional influence of growth factors on the hair follicle

#### 1.2. Most common growth factors

1.3. Hair loss treatments based on the mechanism of growth factors' action

## **References**

### **Chapter 2. PLATELET-RICH PLASMA (PRP) THERAPY (Pakhomova E.E.)**

2.1. From fundamental science to clinical application

2.2. Rationale for PRP application in medicine

2.3. Technical aspects of the PRP preparation process

2.3.1. Blood sampling

2.3.2. Centrifugation

2.3.3. Activation

2.4. PRP therapy in trichology

2.4.1. Mechanism of actions

2.4.2. Early clinical observations

2.4.3. PRP for alopecia areata

2.4.4. PRP for androgenetic alopecia

2.4.5. PRP for scarring alopecia

2.5. Practical aspects

2.5.1. Indications and contraindications

2.5.2. Commercially available kits for PRP production and treatment

2.5.3. Expected clinical effects

2.6. PRP is the most physiological restorer

## **References**

### **Part V. SURGICAL HAIR RESTORATION (Silyuk T.V., Naumov N.G.)**

1.1. History of hair transplantation

1.2. Indications for hair transplantation

1.3. Surgical hair transplantation techniques

1.4. Preoperative counseling

1.5. Stages of the surgery treatment

1.5.1. Donor hair harvesting

Strip harvesting

FUE harvesting

1.5.2. Hair transplantation

1.5.3. Postoperative period

## **References**

### **Part VI. DIETARY SUPPLEMENTS IN TRICHOLOGY (Kayumov S.F.)**

1.1 What are biologically active dietary supplements, and what are they for

1.2. Ingredient composition

1.2.1. Most common ingredients

1.2.2. Features of active ingredient compositions for hair growth

1.2.3. Substances improving carbohydrate metabolism

1.2.4. Dietary supplements of plant origin

## **References**

### **Part VII. DIAGNOSTIC METHODS IN TRICHOLOGY (Barunova N.G.)**

1.1. Classification

1.1.1. General diagnostic methods

1.1.2. Hair evaluation methods

1.2. Diagnostic Trichological Triad

- 1.2.1. Trichoscopy
- 1.2.2. Phototrichogram
- 1.2.3. Clinical photography
- 1.3. Algorithm for the initial examination of the trichology patient

## **References**

### **Part VIII. MOST COMMON HAIR PATHOLOGIES AND BASIC APPROACHES TO TREATMENT**

#### **Chapter 1. Alopecia: clinical types, causes, diagnostics** (Gajigoroeva A.G., Hernandez Jimenes E.I.)

- 1.1. Why does hair fall out?
- 1.2. Androgenetic alopecia
  - 1.2.1. Mechanism of development
  - 1.2.2. Diagnosis
  - 1.2.3 Treatment
- 1.3 Temporary hair loss
  - 1.3.1. Types of temporary hair loss
    - Telogen effluvium
    - Anagen effluvium
  - 1.3.2. Certain conditions causing temporary hair loss
- 1.4. Alopecia areata
  - 1.4.1. Appearance and development of alopecia areata
  - 1.4.2 Epidemiology
  - 1.4.3. Triggering factors
  
  - 1.4.4. Diagnosis
  - 1.4.5. Treatment
- 1.5. Damaged hair

## **References**

#### **Chapter 2. Hair loss therapy**

- 2.1. Medicinal products
  - 2.1.1. Minoxidil and its analogs
    - Clinical and laboratory studies
    - Mechanism of action
    - Clinical efficacy
    - Combined minoxidil preparations and minoxidil analogs
  - 2.1.2. Anti-androgens
  - 2.1.3. Anti-inflammatory drugs (immunosuppressors)
  - 2.1.4. Irritants
    - Non-specific irritants
    - Contact dermatitis-causing agents
  - 2.1.5. Epidermal proliferation-regulation substances
    - Cooper peptides
    - Trans-retinoic acid
- 2.2. Non-medicinal substances for hair restoration
  - 2.2.1. Thymus peptides (Michenco A.V.)

- Alopecia areata
- Androgenetic alopecia
- Telogen effluvium
- Chemotherapy-induced alopecia
- 2.2.2. Plant-derived substances
- 2.2.3 Other compounds
- 2.3. Systemic antiandrogenic therapy for androgenetic alopecia in women (Tsimbalenko T.V.)
- 2.3.1. Classification of antiandrogens
- 2.3.2. Antiandrogenic drugs used in trichology
- Oral contraceptives
- Cyproterone acetate
- Spironolactone
- Flutamide
- Finasteride
- Dutasteride
- Plant-derived antiandrogens
- 2.3.3. Summary
- 2.4. Physical therapy methods to combat hair loss (Khaldina M.V.)
- 2.5. Methods for masking hair loss
- 2.6. Methods of surgical hair restoration
- 2.7. Cell technologies to restore hair growth (Petersen E.V.)
- 2.7.1. Current research in combating hair loss
- 2.7.2. What is currently used in clinics
- 2.8. Comprehensive approach to the treatment of hair loss
- 2.9. Management of alopecia considering the psycho-emotional condition of the patient (Konstantinova V.A.)
- 2.9.1. Psychological status of the alopecia patient
- 2.9.2. Management of alopecia patients
- 2.9.3. Patient education and approaches to alopecia therapy
- 2.9.4. Mesotherapy of the scalp

## **References**

### **Chapter 3. Dandruff** (Hernandez Jimenez E.I., Albanova V.I.)

- 3.1. Causes of dandruff
- 3.1.1. Role of Malassezia species in dandruff development
- 3.1.2. Predisposing and accompanying factors
- 3.2. Active ingredients in anti-dandruff medications
- 3.2.1. Substances with antifungal activity
- Synthetic substances
- Substances of natural origin
- 3.2.2. Sebaceous gland activity-regulating substances
- 3.2.3. Substances regulating keratinization and strengthening skin barrier properties
- 3.2.4. Anti-inflammatory substances
- 3.3. Anti-dandruff products
- 3.3.1 Shampoos
- 3.3.2 Auxiliary products
- 3.3.3. Nutrition

3.4. Anti-dandruff treatment and special hair care: practical recommendations

3.4.1. Antifungal treatment

3.4.2. Improving the epidermal barrier

3.4.3. Cleaning the scalp and hair from flakes

3.4.4. Reducing the greasiness of the skin and hair

3.4.5. Reducing skin itching and sensitivity to irritants

3.4.6. How to take care of your hair

3.5. Folk remedies

## **References**

### **Part IX. UNWANTED HAIR REMOVAL** (Sharova A.A., Bragina I.Y.)

1.1. Hair peculiarities to consider when choosing a method of hair removal

1.1.1. Hair type

1.1.2. Phase of hair growth

1.1.3. Hair color

1.1.4. Melanin distribution in the hair and skin

1.2. Methods of depilation

1.2.1. Waxing and sugaring

1.2.2. Trimming

1.2.3. Shaving

1.2.4. Chemical depilation and hair growth inhibition

1.3. Methods of hair removal

1.3.1. Ultrasonic hair removal

1.3.2. Enzymatic hair removal

1.3.3. Electroepilation

1.3.4. Light-based hair removal

1.4. Skincare after hair removal
